ECOMMERCE

1. EXECUTIVE SUMMARY

Our current ecommerce performance is facing significant challenges, with a probability of strategy success at 0.0%, indicating a substantial gap between our current trajectory and target goals. The strategy gap to target stands at $71, the need for immediate and effective adjustments to our approach. Our target goal of $142 appears increasingly elusive, and it is essential that we reassess our strategies to bridge this gap and get back on track. The lack of progress towards our target is a pressing concern that requires prompt attention and action from our team.

The recent trend in Average Order Value, which has remained flat with a 0.0% shift and low volatility, suggests that our current tactics are not yielding the desired results. This stagnation is a clear indication that our strategies are not resonating with our customers, and we need to rethink our approach to drive growth and increase average order values. To move forward, we must conduct a thorough analysis of our current strategies, identify areas for improvement, and develop new initiatives that can help us bridge the gap to our target goal. By doing so, we can regain momentum and get our ecommerce performance back on track, ultimately achieving our target of $142 and driving long-term success for our business.
