

VistaraBI Strategic Intelligence Report

BUSINESS DOMAIN: RETAIL

EXECUTIVE SUMMARY

Comprehensive strategic intelligence report for archive (12). Analyzed 2 KPIs across 1 sources.

OPERATIONAL INTELLIGENCE DASHBOARD (MODULE 5)

100.0%

Strategy Success Probability

\$2,50,000

Growth Gap to Target

\$12,50,000

Projected Goal Target

STRATEGIC ROADMAP (MODULE 7)

- Omnichannel Expansion Starts**
Strategy Milestone for Day 5: Projected success uplift initiated.
- Omnichannel Expansion Ramp Complete**
Strategy Milestone for Day 15: Projected success uplift initiated.
- Dynamic Pricing Starts**
Strategy Milestone for Day 15: Projected success uplift initiated.
- Dynamic Pricing Ramp Complete**
Strategy Milestone for Day 25: Projected success uplift initiated.
- Loyalty Program Launch Starts**
Strategy Milestone for Day 25: Projected success uplift initiated.
- Loyalty Program Launch Ramp Complete**
Strategy Milestone for Day 35: Projected success uplift initiated.
- Inventory Optimization Starts**
Strategy Milestone for Day 35: Projected success uplift initiated.
- Inventory Optimization Ramp Complete**
Strategy Milestone for Day 45: Projected success uplift initiated.
- Flash Sales Event Starts**
Strategy Milestone for Day 45: Projected success uplift initiated.
- Flash Sales Event Ramp Complete**
Strategy Milestone for Day 50: Projected success uplift initiated.
- Targeted Social Ads Starts**
Strategy Milestone for Day 55: Projected success uplift initiated.
- Targeted Social Ads Ramp Complete**
Strategy Milestone for Day 65: Projected success uplift initiated.

- **Store Layout Update Starts**
Strategy Milestone for Day 65: Projected success uplift initiated.
 - **Store Layout Update Ramp Complete**
Strategy Milestone for Day 75: Projected success uplift initiated.
 - **Vendor Renegotiation Starts**
Strategy Milestone for Day 75: Projected success uplift initiated.
 - **Cross-selling Promos Starts**
Strategy Milestone for Day 80: Projected success uplift initiated.
 - **Vendor Renegotiation Ramp Complete**
Strategy Milestone for Day 85: Projected success uplift initiated.
 - **Referral Program Starts**
Strategy Milestone for Day 85: Projected success uplift initiated.
 - **Goal Target: 1250000**
Strategy Milestone for Day 90: Projected success uplift initiated.
-

ANALYTIC DIALOGUE (MODULE 6 Q&A)

Q1: Can we directly aggregate the `Total` column for national sales figures?

A1: Yes, structurally, provided the `Total` column is defined as a numeric type (DECIMAL/FLOAT) in the `supermarket\_sales` schema rather than VARCHAR, ensuring summation operations are valid.

Q2: Do we have the necessary dimension keys to break down sales by Branch and City?

A2: The schema explicitly lists `Branch` and `City` columns, allowing for GROUP BY operations without requiring an external dimension table join at this stage.

Q3: Is there a temporal column available to analyze seasonal patterns in the `Total` sales data?

A3: The visible schema lists `Invoice ID`; we need to verify if one of the "+12 more" columns contains a DATE or TIMESTAMP type to enable time-series partitioning and window functions.

Q4: To calculate Profit, do we have a Cost column in the current `supermarket\_sales` table?

A4: No, the current schema only exposes `Total`; an ETL transformation would be required to join a product cost table or ingest a margin percentage column to derive Profit structurally.

Q5: Can we join this sales data with Inventory levels to compute Turnover?

A5: Not directly; there is no `Stock Level` table or foreign key relationship defined in the current `supermarket\_sales` schema structure to support this join operation.

Q6: What is the expected data type for `Invoice ID` to ensure unique row identification?

A6: It should be structured as a STRING or UUID primary key to prevent integer overflow and ensure uniqueness across high-volume ingestion pipelines.

Q7: How should we handle structural mismatches if `Total` comes in as a string with currency symbols?

A7: The ETL pipeline must include a transformation step to strip non-numeric characters and cast the column to a standardized NUMERIC type before loading into the warehouse.

Q8: Are `Customer type` and `Gender` structured correctly for segmentation analysis?

A8: Yes, these appear as categorical columns; structurally they support indexing for faster filtering during segmentation queries without requiring complex type conversions.

Q9: Do we need to normalize the `Branch` and `City` data into separate lookup tables?

A9: Structurally, denormalization is acceptable here for read performance, but a dimension table could enforce referential integrity if data quality governance requires strict type validation.

Q10: If we need to add `Gross Margin` as a persisted column, what schema change is required?
A10: This requires an `ALTER TABLE` operation to add the column, followed by a backfill ETL job to compute values based on existing `Total` and cost logic to maintain schema compatibility.

PREDICTIVE FORECAST VISUALIZATION (MODULE 8)

KPI: Total Sales | Trend: Bullish (25% Projected Growth)
Confidence Score: 40% Reliability
