

VistaraBI Strategic Intelligence Report

BUSINESS DOMAIN: RETAIL

EXECUTIVE SUMMARY

Comprehensive strategic intelligence report for archive (2). Analyzed 2 KPIs across 1 sources.

OPERATIONAL INTELLIGENCE DASHBOARD (MODULE 5)

STRATEGIC ROADMAP (MODULE 7)

- Omnichannel Expansion Starts**
Strategy Milestone for Day 5: Projected success uplift initiated.
- Omnichannel Expansion Ramp Complete**
Strategy Milestone for Day 15: Projected success uplift initiated.
- Dynamic Pricing Starts**
Strategy Milestone for Day 15: Projected success uplift initiated.
- Dynamic Pricing Ramp Complete**
Strategy Milestone for Day 25: Projected success uplift initiated.
- Loyalty Program Launch Starts**
Strategy Milestone for Day 25: Projected success uplift initiated.
- Loyalty Program Launch Ramp Complete**
Strategy Milestone for Day 35: Projected success uplift initiated.
- Inventory Optimization Starts**
Strategy Milestone for Day 35: Projected success uplift initiated.
- Inventory Optimization Ramp Complete**
Strategy Milestone for Day 45: Projected success uplift initiated.
- Flash Sales Event Starts**
Strategy Milestone for Day 45: Projected success uplift initiated.
- Flash Sales Event Ramp Complete**
Strategy Milestone for Day 50: Projected success uplift initiated.
- Targeted Social Ads Starts**
Strategy Milestone for Day 55: Projected success uplift initiated.
- Targeted Social Ads Ramp Complete**
Strategy Milestone for Day 65: Projected success uplift initiated.

- **Store Layout Update Starts**
Strategy Milestone for Day 65: Projected success uplift initiated.
 - **Store Layout Update Ramp Complete**
Strategy Milestone for Day 75: Projected success uplift initiated.
 - **Vendor Renegotiation Starts**
Strategy Milestone for Day 75: Projected success uplift initiated.
 - **Cross-selling Promos Starts**
Strategy Milestone for Day 80: Projected success uplift initiated.
 - **Vendor Renegotiation Ramp Complete**
Strategy Milestone for Day 85: Projected success uplift initiated.
 - **Referral Program Starts**
Strategy Milestone for Day 85: Projected success uplift initiated.
 - **Goal Target: 1250000**
Strategy Milestone for Day 90: Projected success uplift initiated.

ANALYTIC DIALOGUE (MODULE 6 Q&A)

Q1: Can we directly query the current Stock Level for each StockCode from the OnlineRetail table?

A1: No, the current schema is transactional; it lacks a dedicated Inventory table or StockLevel column required to store static quantity states.

Q2: How do we structurally support the Inventory Value KPI given the existing columns?

A2: We cannot; calculating Inventory Value requires a CostPrice column and a QuantityOnHand field, neither of which are defined in the current 8-column schema.

Q3: Is the InvoiceDate column sufficient to analyze seasonal stock patterns?

A3: Structurally no; InvoiceDate tracks sales events, but analyzing stock patterns requires a separate time-series schema to snapshot inventory levels daily.

Q4: Can we segment Stock Level analysis by Store ID using the current dataset?

A4: No, the schema lacks a StoreID dimension column; adding this requires a schema migration to ingest location data from the warehouse management system.

Q5: What join logic is needed to calculate Profitability per StockCode?

A5: A foreign key relationship is needed to join StockCode to a Product Cost table, which is currently missing from the ingestion pipeline.

Q6: Why is the Inventory Turnover KPI returning N/A in the summary?

A6: The formula requires Average Inventory as a denominator; structurally, there is no table storing inventory balances to perform this division.

Q7: Are the data types for Quantity compatible with stock deduction logic?

A7: Quantity is numeric, but the ETL transform must handle negative integers for returns separately to avoid corrupting stock calculation logic.

Q8: Can we ingest warehouse stock logs into the OnlineRetail table directly?

A8: No, the format is incompatible; a new FactInventory table must be created to avoid mixing transactional sales data with static stock data.

Q9: Is the StockCode column type consistent for joining with external supplier data?

A9: Yes, it is a string type, but the pipeline must enforce normalization to ensure compatibility with external supplier schema formats.

Q10: What schema architecture do you recommend to enable Stock Level diagnostics?
A10: Implement a Star Schema with a FactSales table and a new FactInventory table to structurally support Stock Level and Inventory Value KPIs.

PREDICTIVE FORECAST VISUALIZATION (MODULE 8)

KPI: Stock Level | Trend: Bullish (25% Projected Growth)
Confidence Score: 40% Reliability
