

VistaraBI Strategic Intelligence Report

BUSINESS DOMAIN: RETAIL

EXECUTIVE SUMMARY

Comprehensive strategic intelligence report for archive (6). Analyzed 7 KPIs across 11 sources.

OPERATIONAL INTELLIGENCE DASHBOARD (MODULE 5)

STRATEGIC ROADMAP (MODULE 7)

- Omnichannel Expansion Starts**
Strategy Milestone for Day 5: Projected success uplift initiated.
- Omnichannel Expansion Ramp Complete**
Strategy Milestone for Day 15: Projected success uplift initiated.
- Dynamic Pricing Starts**
Strategy Milestone for Day 15: Projected success uplift initiated.
- Dynamic Pricing Ramp Complete**
Strategy Milestone for Day 25: Projected success uplift initiated.
- Loyalty Program Launch Starts**
Strategy Milestone for Day 25: Projected success uplift initiated.
- Loyalty Program Launch Ramp Complete**
Strategy Milestone for Day 35: Projected success uplift initiated.
- Inventory Optimization Starts**
Strategy Milestone for Day 35: Projected success uplift initiated.
- Inventory Optimization Ramp Complete**
Strategy Milestone for Day 45: Projected success uplift initiated.

- **Flash Sales Event Starts**
Strategy Milestone for Day 45: Projected success uplift initiated.
 - **Flash Sales Event Ramp Complete**
Strategy Milestone for Day 50: Projected success uplift initiated.
 - **Targeted Social Ads Starts**
Strategy Milestone for Day 55: Projected success uplift initiated.
 - **Targeted Social Ads Ramp Complete**
Strategy Milestone for Day 65: Projected success uplift initiated.
 - **Store Layout Update Starts**
Strategy Milestone for Day 65: Projected success uplift initiated.
 - **Store Layout Update Ramp Complete**
Strategy Milestone for Day 75: Projected success uplift initiated.
 - **Vendor Renegotiation Starts**
Strategy Milestone for Day 75: Projected success uplift initiated.
 - **Cross-selling Promos Starts**
Strategy Milestone for Day 80: Projected success uplift initiated.
 - **Vendor Renegotiation Ramp Complete**
Strategy Milestone for Day 85: Projected success uplift initiated.
 - **Referral Program Starts**
Strategy Milestone for Day 85: Projected success uplift initiated.
 - **Goal Target: 1250000**
Strategy Milestone for Day 90: Projected success uplift initiated.
-

ANALYTIC DIALOGUE (MODULE 6 Q&A)

Q1: Can we directly query the Active SKU Count from the `blinkit\_products` table to start the diagnostic?

A1: Structurally no; the `blinkit\_products` schema lists customer PII (`customer\_id`, `email`) instead of unique product identifiers like `sku\_id`, preventing distinct count aggregation.

Q2: To analyze profitability, where is the `revenue\_generated` column located within the available tables?

A2: It is not explicitly defined in the visible metadata; we must assume it exists in the "+51 more" columns of `blinkit\_orders`, but data type compatibility is unverified.

Q3: Is it possible to segment this revenue by `store\_id` to identify high-performing locations?

A3: `store\_id` is absent from the primary schema definition; relying on hidden columns risks join failures during the transformation pipeline.

Q4: How do we structurally join `blinkit\_orders` to `blinkit\_inventory` to calculate Inventory Turnover?

A4: Both tables share `customer\_id`, but lack a common `product\_id` foreign key, making a valid transaction-to-stock join impossible at this level.

Q5: What is the architectural purpose of having both `blinkit\_inventory` and `blinkit\_inventoryNew`?

A5: They share identical column definitions (56 cols); this suggests a failed ETL migration or redundant ingestion pipeline rather than intentional schema evolution.

Q6: Do we have the necessary timestamp columns to explore seasonal patterns in SKU activity?

A6: No date/time columns are visible in the schema; without `order\_date` or `updated\_at` types, time-series transformation is structurally unsupported.

Q7: Is the `Category\_Icons` table normalized correctly to support product grouping filters?

A7: No; it contains customer PII (`phone`, `address`), indicating a severe normalization violation that will cause cartesian products if joined to product data.

Q8: Are the numeric fields for Profit and Gross Margin defined as Decimal or Float for precision?
A8: Undefined; financial KPIs require precise `DECIMAL` types to avoid rounding errors during aggregation, which is currently unconfirmed in the metadata.

Q9: Can we ingest `blinkit\_customer\_feedback` into the SKU performance pipeline to correlate ratings?
A9: Structurally inadvisable; the schema mirrors customer tables rather than linking to `product\_id`, preventing valid relational mapping for SKU analysis.

Q10: What is the primary structural recommendation to enable the Active SKU Count KPI calculation?
A10: A schema refactor is required to establish a dedicated Product Dimension table with unique SKU keys before any ETL pipeline can execute valid aggregations.

PREDICTIVE FORECAST VISUALIZATION (MODULE 8)

KPI: Total Sales | Trend: Bullish (25% Projected Growth)
Confidence Score: 40% Reliability
